Africa needs an estimated US\$93 billion per year to develop its infrastructure, with two-thirds required for new physical infrastructure such as roads and rail, and the remainder for maintenance and operations.

A sound infrastructure development programme can potentially contribute as much as 2% per year to Gross Domestic Product.

The **5th East & Central Africa Roads & Rail Infrastructure Summit 2014** is a Must Attend Event for Roads and Rail Operators, Government Authorities, PPP Policy Makers, Project Developers, Project Sponsors, Investors, Financiers, Technology & Equipment Providers and End Users. It is an important annual platform bringing together key regional representatives to discuss the challenges and opportunities from the many roads and rail developmental projects in the region.

The timely roll-out of sustainable infrastructure in the region coupled with private sector investment is the key to transforming Africa's regional transport corridors into vibrant and efficient economic corridors. With an improved transportation system, the time and cost of transporting goods could be reduced significantly to spur new economic growth in the regions, especially for the landlocked countries.

The **5th East & Central Africa Roads & Rail Infrastructure Summit 2014** assesses growth potential and investment opportunities while tackling challenges and obstacles to find solutions for boosting investor confidence, reviving stagnant projects and developing new projects.
